Compared with its previous version, Acrobat only included the most recent versions of Adobe Acrobat and Acrobat Reader. This may be proof that Adobe is planning a subscription version of its Acrobat program in the near future. It's also important to note: Adobe is restructuring ACAD into a single company. It now reports to Terry Myerson, executive vice president of the Windows and Devices Group. Myerson succeeds Scott Allar as president of the company. Acrobat DC and Typekit apps are all now part of the newly named Creative Cloud. Adobe is also making big changes into its communication department, with Vice President for Marketing and Communications Michael Beltz taking over for David Petschl. But Lightroom is getting more and more interesting with more and more features. It's true, Lightroom does require a hefty amount of RAM (recommended 2 GB at the moment), but it's also a fetching program to look at, and once you get going you probably won't want to take your pictures anywhere else. Finally, Lightroom 5 brings the long-awaited offline option—a great feature that the company should've included after Lightroom 4. And Lightroom 5 is built around a new, cloud-based playback system, with the ability to use Lightroom Collection, Images, or Events to preview and collect your images into those sorts of Collections. One of these new features is the 'Instant Photo' which is a perfect fit for mobile editing. Instant Photo allows you to instantly create a photo from up to 10 different photos at the same time, without the need to manually merge photos, correct exposure or correct white balance.

This year, Adobe added Premiere Rush and Premiere Clip video editing to its Creative Cloud portfolio. The consumer-oriented products are part of the company's business unit of products aimed at teenagers and young adults. (Unlike other Creative Cloud users, young professionals ages 18 to 29 can also subscribe to the Foundation, a \$15/month service and an educational toolset that enables them to buy the company's apps.) Adobe also introduced a new high dynamic range photo editing feature in recent updates to its program. The feature mimics the way cameras capture a wider range of tones than the human eye can perceive. The software automatically creates HDR images from multiple low-dynamic range (LDR) images. The new feature may make it easier for photographers and prosumers to shoot photos with less compression and output greater dynamic range, making RAW photos less of a challenge. The new software can slightly unify areas of mixed-tone LDR photos, but more work is needed to improve the technology. Certain shapes in artworks were flattened in previous versions of Photoshop. This year, the company introduced new features that will nearly always flatten the artwork (i.e., smooth out some zoom-in views of the shapes). However, you can still save the file as a flattened image. Photoshop will keep the overall shape of the artwork (i.e., mountains, mountains and valleys, etc.) unchanged if you do so. This new function makes it easier to use Photoshop for beginners who take selfies in public and have the software remove any perspectives added for digital editing.

With over 30 million new customers using Photoshop every quarter, Adobe was able to build momentum around the new features, releasing them one at a time for weeks before the official launch. These features are now available on all platforms – Windows, macOS and mobile – with full native support in the near future through Adobe Sensei and AI formats. By thinking differently to the traditional way of building software, Adobe created a workflow that makes it easier for the average user to edit images with Photoshop – and now even enables them to collaborate and work together from anywhere. “In the democratization of photography, compression lets us reach a wider audience, but it comes at a price. In the desktop environment, users expect to be able to bring their work to a variety of devices. Unlocking the value of our vast creative tools is one of the key components in meeting these expectations,” said Shantanu Narayan, senior VP of product management at Adobe. “This is the first time we’ve seen collaboration made unrestricted and

convenient, thanks to AI technologies like Adobe Sensei and Adobe Contribute. Through these innovations, we expanded our ability to create, share and use the most intelligent and powerful editing tool in the world, and make Photoshop the ultimate partner in your creativity.”

Also, Apple's recently announced "Photos" app will bundle in a lot of desktop-level user interfaces and tools — especially feature overlays for the "Photos" features — as well as third-party tools such as Color are set to start UWP/modern app development as well. That's set to happen in early 2018, with plans to generally release native UWP-based apps for Adobe's line of photography, design, and media products at some point before then. Photos and Film will take the lead for UWP development, and Creative Cloud users will get options to run apps and apps natively, while Creative Cloud for Windows will also start supporting native programs.
