Mac or Windows, it doesn't matter. Photoshop is the best software there is for professional graphics work. And because Macs are a bit harder on the pocket, many people will eventually get a computer with Windows. I own a Macbook Pro 13 Retina with 16GB of RAM. I always upgrade to the latest version of CS and I have updated to the latest version of Aperture with the latest version of Shutter (although that was too late, it happened some months ago). The performance of Aperture is much better than CS. I don't know, and don't want to guess, what is the reason of why CS is so much slower and Aperture is so much faster. I can only assume that CS is bloated and Aperture has not the same bloat as CS. I don't why Adobe decided to put the touch "style" on the desktop (except for the iPad app) and on the mobile versions of photoshop, lightroom and Aperture. I strongly agree with Apple to not put iOS style on the Mac desktop. I don't want to have an iOS interface on my Mac. - Yes they have the same creativity tools, however, CS still uses more RAM than Aperture. You need to give it 12 GB (as a minimum) to have a good experience with it. CS uses already almost 15 GB. It consumes too much RAM on my Macbook Pro. - They had to improve the smart previews. They are more "smarter" than they used to be. They do not bother anymore if you apply corrections on an image, or perform a draw tool in CS or if you flatten layers. - I hate the new interface. I get quicker performance with the old interface. I had to learn how to use it. I can't believe that I have to redesign it again. I hated them with Lightroom 3 and now I have to learn they new interface. It really is a pain in the butt. I would say that it's a failure for the CS team not to have impressed me. Also, I no longer use the "keyboard shortcuts". It's frustrating. I have the Mac keyboard. I'm typing so hard, it's not funny.

Do not confuse hard drive backup with data storage. A back up ensures that the data is safe, while a reliable storage is hard to find. Some may argue that the data on the storage is lost, but in reality, hard drives are the most durable and reliable storage device that can be bought today. It is lack of magnetic storage media that causes the data to degrade over time, so it is always best to choose the best storage for your data. The moderate price is certainly an important factor in the selection. A low price implies a guarantee, and a guarantee is not important for some data storage, but it provides a great assurance for long-term storage. The data stability and safety are the most important aspects, and sometimes, they are ignored in favor of a lower price. That is why you will need to over-invest in a reliable hard drive storage. If you are investing in any of these, remember that you will not use the disk in the same way as you do with the disk in your computer because they have different transfer speeds, capacities, and functions in which the transfer rates are usually measured in megabytes or gigabytes per second. (this is not the same as speed or file size which is supposed to estimate the length of time you can remain online). In a mobile-first design-centered world, Photoshop can definitely be a huge asset to your business. With features such as Live Project, the ability to use Affinity Designer, mobile previews and integration with Facebook Live, it's no wonder why it is one of the most downloaded desktop applications. e3d0a04c9c
