The preview window includes a grid where you can see the effect of settings on a photo. There's also a Close Preview button next to the Grid. You can zoom in to see details at different resolution levels. A new button in the View menu is Shapes that displays a selection that allows you to modify the shape of an object, and then drag and drop it wherever you wish in the image. Although it's probably little more than a conversion tool to help you get rid of those non-photo background elements, it's quite useful when working with graphics. You can then collapse the selection and explore the animation options. Adobe Photoshop has a well established client base so it's no surprise that there's another new High Dynamic Range (HDR) feature that's been introduced. Lightroom 7 lets you grade exposure and color, capture extra detail in highlights and shadows, and capture more vivid colors in photographs. Simply program the new Automatic setting to fit your photography needs.
